Atty. Docket No LUND-0013

PATENT

## CLAIMS

We Claim:

- 1 1. A device for the automatic control of joints in electrical
- 2 high voltage lines, comprising:
- 3 a first support;
- a first wheel for lying on the line;
- a driving means for driving of said first wheel;
- at least one second wheel, for lying on said line;
- 7 a measurement unit in contact with means for the measurement
- 8 of physical data at said joint, said measurement unit comprising at
- 9 least one pointed element for electrical contact with the line,
- wherein at least one of said first and second wheels is
- 11 provided electrically connected to said measurement unit.
- 1 2. The device according to claim 1, wherein at least two of
- 2 said first and second wheels are electrically connected to said
- 3 measurement unit, the device further comprising:
- 4 means for feeding current is provided to feed an electrical
- 5 current from the first wheel to the second wheel through the line.

Atty. Docket No LUND-0013 PATENT

- 1 3. The device according to claim 1, wherein the means for
- 2 measurement of physical data in the form of one pointed element
- 3 also comprise at least one of said first and second wheels.
- 1 4. The device according to claim 1, further comprising:
- a retainer, journalled in the support so as to be swung up
- 3 below the line to increase pressure of the wheel against the line.
- 1 5. The device according to claim 2, further comprising:
- a retainer, journalled in the support so as to be swung up
- 3 below the line to increase pressure of the wheel against the line.
- 1 6. The device according to claim 3, further comprising:
- a retainer, journalled in the support so as to be swung up
- 3 below the line to increase pressure of the wheel against the line.
- 7. The device according to claim 1, further comprising:
- 2 measurement indicators for measurement of the position of the
- 3 device in relationship to the actual joint.

Atty. Docket No LUND-0013 PATENT

1 8. The device according to claim 2, further comprising:

2 measurement indicators for measurement of the position of the

device in relationship to the actual joint.

- 9. The device according to claim 3, further comprising:
- 2 measurement indicators for measurement of the position of the
- device in relationship to the actual joint.
- 1 10. The device according to claim 4, further comprising:
- 2 measurement indicators for measurement of the position of the
- device in relationship to the actual joint.
- 1 11. The device according to claim 5, further comprising:
- 2 measurement indicators for measurement of the position of the
- device in relationship to the actual joint.
- 1 12. The device according to claim 6, further comprising:
- 2 measurement indicators for measurement of the position of the
- device in relationship to the actual joint.

Atty. Docket No LUND-0013 PATENT The device according to claim 7, wherein the measurement 1 indicator comprises a laser distance gauge. 2 14. The device according to claim 8, wherein the measurement 1 indicator comprises a laser distance gauge. 2 The device according to claim 9, wherein the measurement 1 2 indicator comprises a laser distance gauge. The device according to claim 10, wherein the measurement 1 2 indicator comprises a laser distance gauge. 17. The device according to claim 11, wherein the measurement 1 indicator comprises a laser distance gauge. 2 The device according to claim 12, wherein the measurement 1 indicator comprises a laser distance gauge. 2
